PROFESSIONAL PROFILE

Self-taught **AI Inference & Infrastructure Engineer** with hands-on experience building and serving multimodal generative AI pipelines. Experienced with **vLLM, vLLM-Omni, FastAPI, Python, Docker, and Linux**, including asynchronous API services, containerized deployments, and remote GPU workloads. Focused on LLM inference, model-serving reliability, latency and throughput evaluation, and reproducible infrastructure engineering. Combines practical AI engineering experience with a software engineering foundation and a commitment to building measurable, reliable systems.

CORE COMPETENCIES & TECHNICAL SKILLS

AI Inference & ML:	LLM Inference, Model Serving, vLLM, vLLM-Omni, PyTorch, Hugging Face Transformers, Python, Multimodal AI, Text-to-Speech (TTS), Video Generation, RAG, Model Optimization.
Serving & Infrastructure:	FastAPI, Asynchronous Python, REST APIs, Docker, Docker Compose, Linux, Shell Scripting, Git, GitHub Actions, Remote GPU Workloads.
Full Stack Web Development:	JavaScript (ES6+), TypeScript, React, Next.js, HTML5, CSS3, Tailwind CSS, PostgreSQL (SQL), MongoDB / Mongoose (NoSQL), Microservices.

PROFESSIONAL EXPERIENCE

Anivale — *AI Engineer Intern* **Feb 2026 – Oct 2026 | Remote, India**

- **Multimodal AI Pipelines:** Integrated workflows combining LLM text generation, text-to-speech (TTS), and video generation components.
- **LLM Inference & Serving:** Worked with **vLLM** and **vLLM-Omni** for model serving and multimodal inference execution, with a focus on throughput, latency, and Time to First Token (TTFT).
- **Asynchronous Backend Services:** Built backend workflows using **FastAPI** and asynchronous Python to coordinate requests and data across AI pipeline stages.
- **Containerized Deployment:** Used **Docker** and **Docker Compose** to package and run multi-service AI workloads across development and testing environments.
- **Linux & GPU Workloads:** Worked in **Ubuntu Linux** environments with remote GPU servers to run and manage AI inference workloads.

EDUCATION & CERTIFICATIONS

Full Stack Open — *University of Helsinki* **Dec 2024**

Comprehensive, production-grade curriculum covering JavaScript, React, Redux, Node.js, Express.js, MongoDB, GraphQL, REST APIs, TypeScript, CI/CD pipelines, and Docker containers. Emphasized test-driven development and scalable architecture.
